

SERIES 6000

FACE AND SIDE REMOVABLE
INSECT SCREENS

TAMCO 

EXPERIENCE TRUE EXCELLENCE IN SERVICE, QUALITY,
AND MAINTENANCE-FREE PERFORMANCE.

SERIES 6000

ALUMINUM STRENGTH AND DURABILITY

- Aluminum insect screens and frames provide a prolonged and rust-free operational life over galvanized steel types.
- Aluminum oxidizes to form a protective film. If the surface is scratched, the film reforms.
(Standard insect screen is produced with a mill finish.)

SILICONE FRAME SEALS

- Silicone frame seals outperform all other existing seals due to flexibility and durability. Silicone seals have an estimated service life of 30 years.
- Silicone seals are virtually unaffected by cold operating temperatures.
- Silicone's superior dynamic fatigue resistance ensures phenomenal resistance to weathering, compression set, heat and UV rays.

FACE OR SIDE REMOVABLE

- TAMCO Insect Screens are designed to be removed from the frame easily, to facilitate cleaning.
- Face removable screens are easily lifted out of the front of the frame, using nylon finger pulls.
- Side removable insect screens are designed for installations where front removal is not possible. The screen slides out from the side of the frame using the pull handle.

IDEAL SOLUTION

- TAMCO Insect Screens are the ideal solution for preventing foreign particles from entering filtration systems.
- Insect screens are perfect for fresh air intake applications in areas with high-density insect populations and in areas prone to small, air-borne debris accumulation.
